

Wireless Monitoring Receiver

Monitoring

Cloud Hosting with Meaco

The Meaco cloud receiver boasts a reception range of over 12 miles line of sight and has been consistently proven to have the longest reception range in customer testing.

The receiver module is on the end of a 2m lead to allow it to be placed in the best position away from electrical noise and interference . When the custom 3Db gain aerial is attached you get the best reception possible.

This allows for more reliable data collection on those awkward sites such as castles with thick stone walls and geographically large sites, especially open air museums, and reduces the need for repeaters.

The receiver can connect to the cloud via Ethernet or Wi-Fi should the network connection fail the receiver has a memory which will hold millions of data points. As soon as the connection is re established the data is uploaded. This goes hand in hand with a backup battery which provides up to 4 hours running time in the event of a power cut.

The receiver can be wall mounted or freestanding.

TECHNICAL DATA

POWER SUPPLY	Mains Power
RANGE	12 miles line of sight
CONNECTIONS	Ethernet or WiFi as standard
DIMENSIONS	199mm x 157mm x 62mm 1700g including backup battery
